SEPM LAB PRACTICAL -02

PROJECT TITLE: - Online Food Delivery System

Aim: - Identify Requirement-Functional requirement, non-functional requirement.

Functional Requirement: -

Functional requirements describe what the system should do.

1. User Registration

- The system should allow new users to create an account using their email ID or mobile number.
- Every user should have a unique username and password.

2. User Login

- Registered users should be able to log in using their username and password.
- The system should verify the login details before allowing access.

3. Manage User Profile

- Users should be able to edit their personal information.
- Users can update their delivery address and contact number whenever required.

4. View Restaurants

- Customers should be able to see the list of available restaurants.
- The system should display restaurant details such as name, rating, menu, and estimated delivery time.

5. View Food Menu

- Customers should be able to view the food items offered by each restaurant.
- The menu should show the food name, price, description, and image.

6. Search Food

- The system should allow users to search for food items or restaurants.
- Users can filter food based on category, price, or rating.

7. Add Items to Cart

- Customers should be able to add food items to their cart.
- They should also be able to change the quantity or remove items from the cart.

8. Place Order

- Users should be able to place an order after confirming the items in the cart.
- The system should generate an order number after successful confirmation.

9. Payment

- The system should support different payment methods such as:
  - UPI
  - Credit/Debit Card
  - Net Banking
  - Cash on Delivery

10. Order Tracking

- Customers should be able to check the status of their order.
- The order status may include:
  - Order Confirmed
  - Preparing Food
  - Out for Delivery
  - Delivered

11. Ratings and Reviews

- Customers should be able to rate the food and restaurants.
- Users can also write reviews after receiving the order.

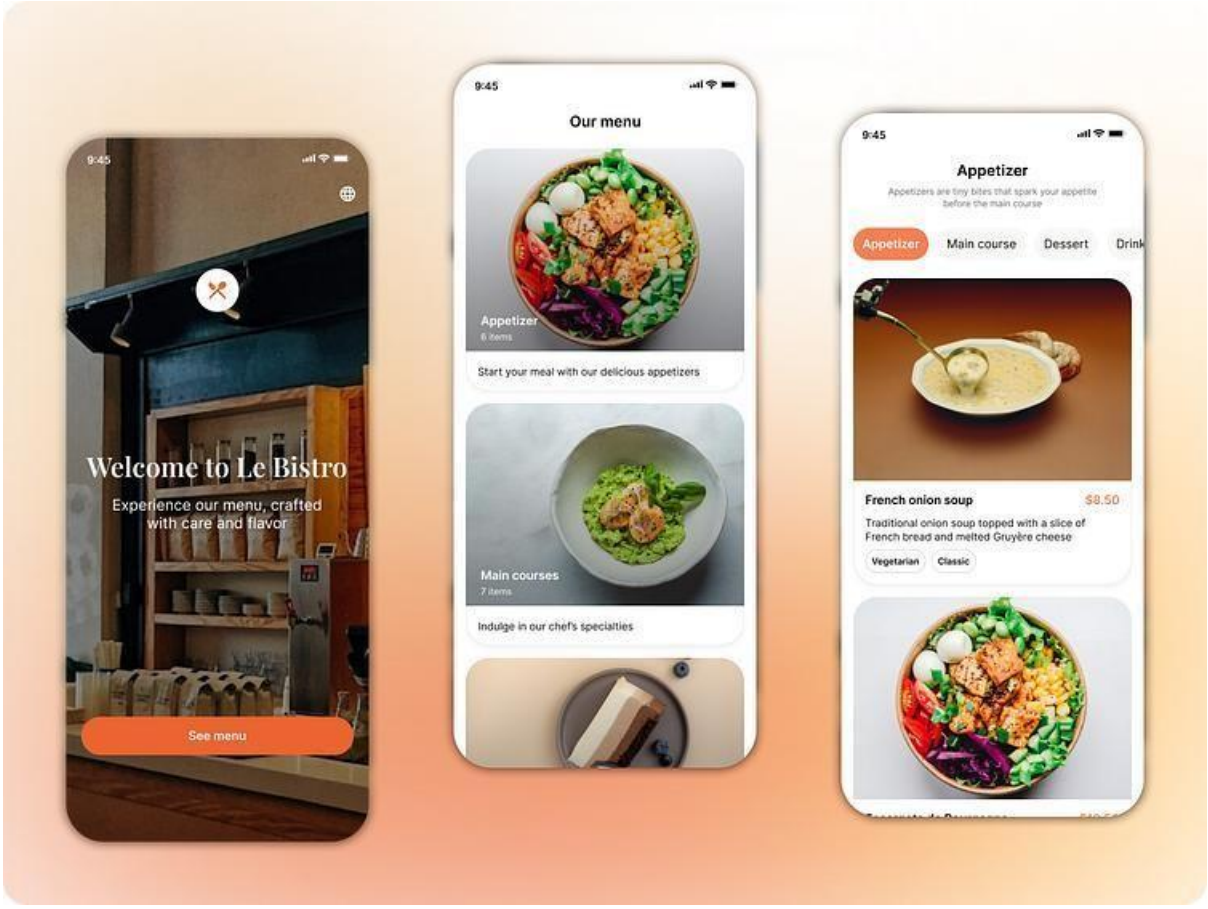

12. Order History

- Customers should be able to view all their previous orders.
- They can reorder the same food if required.

13. Admin Module The

admin should be able to:

- Add or remove restaurants.
- Manage food items.
- View customer orders.
- Manage users.
- Generate reports.

Non-Functional Requirements

Non-functional requirements describe how the system should perform.

1. Performance

- The system should respond quickly to user requests.
- Food search and order confirmation should take only a few seconds.

2. Security

- User passwords should be stored securely.
- Payment information should be protected.
- Only authorized users should access the admin panel.

3. Reliability

- The system should work properly without frequent errors.
- Customer orders should be processed correctly.

4. Availability

- The system should be available 24 hours a day and 7 days a week.
- Users should be able to access the application anytime.

5. Scalability

- The system should be able to handle more users and restaurants as the business grows.

6. Usability

- The application should have a simple and user-friendly interface.
- Even first-time users should find it easy to use.

7. Maintainability

- The system should be easy to update and maintain.
- New features should be added without affecting existing features.

8. Compatibility

- The application should work on Android phones, iPhones, laptops, and desktop computers.
- It should support popular web browsers like Chrome, Edge, and Firefox.

9. Data Integrity

- Customer details, restaurant information, and order details should be stored accurately.
- The system should avoid duplicate or incorrect records.

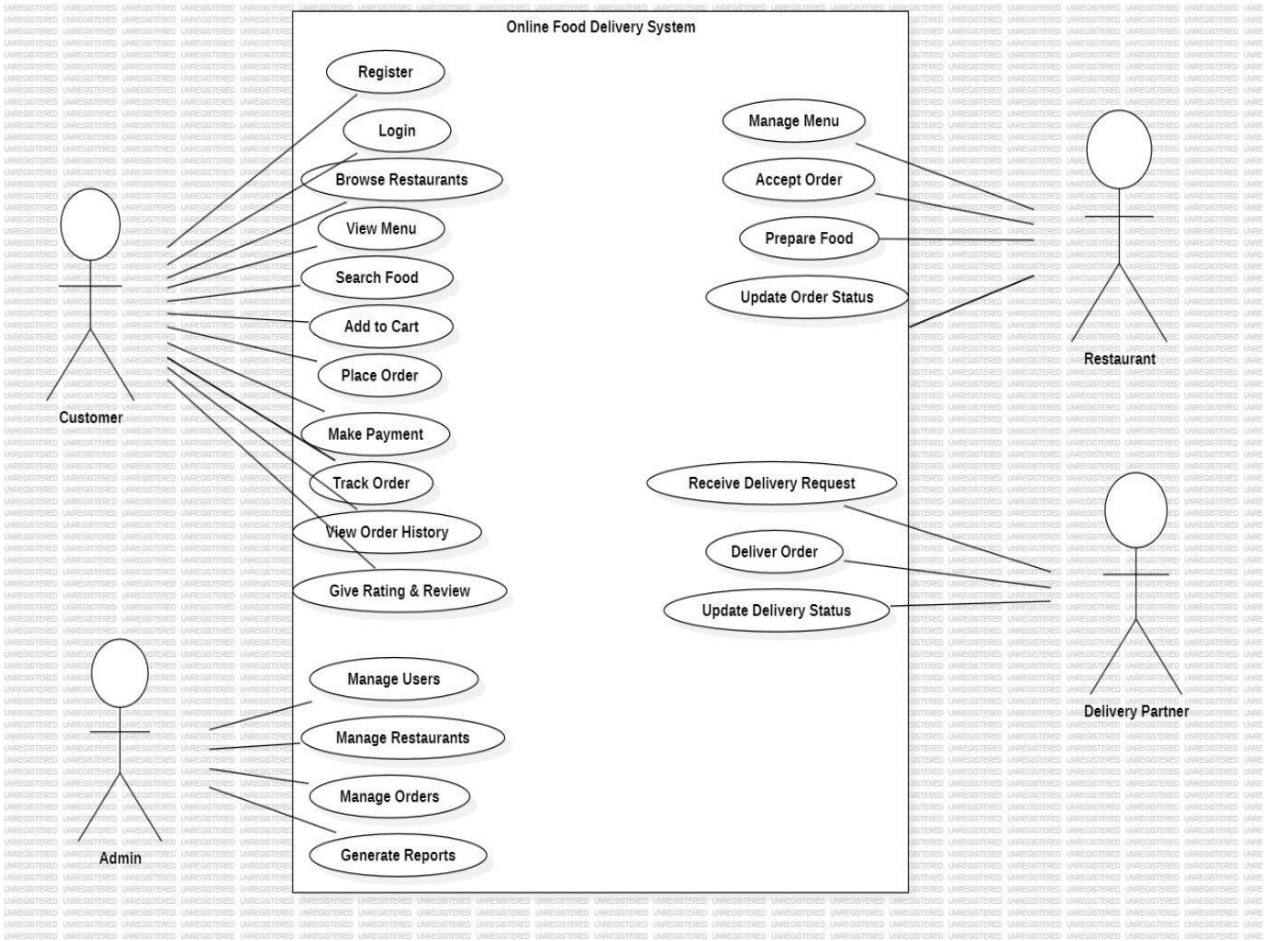

10. Backup and Recovery

- The database should be backed up regularly.
- Data should be recoverable in case of system failure.

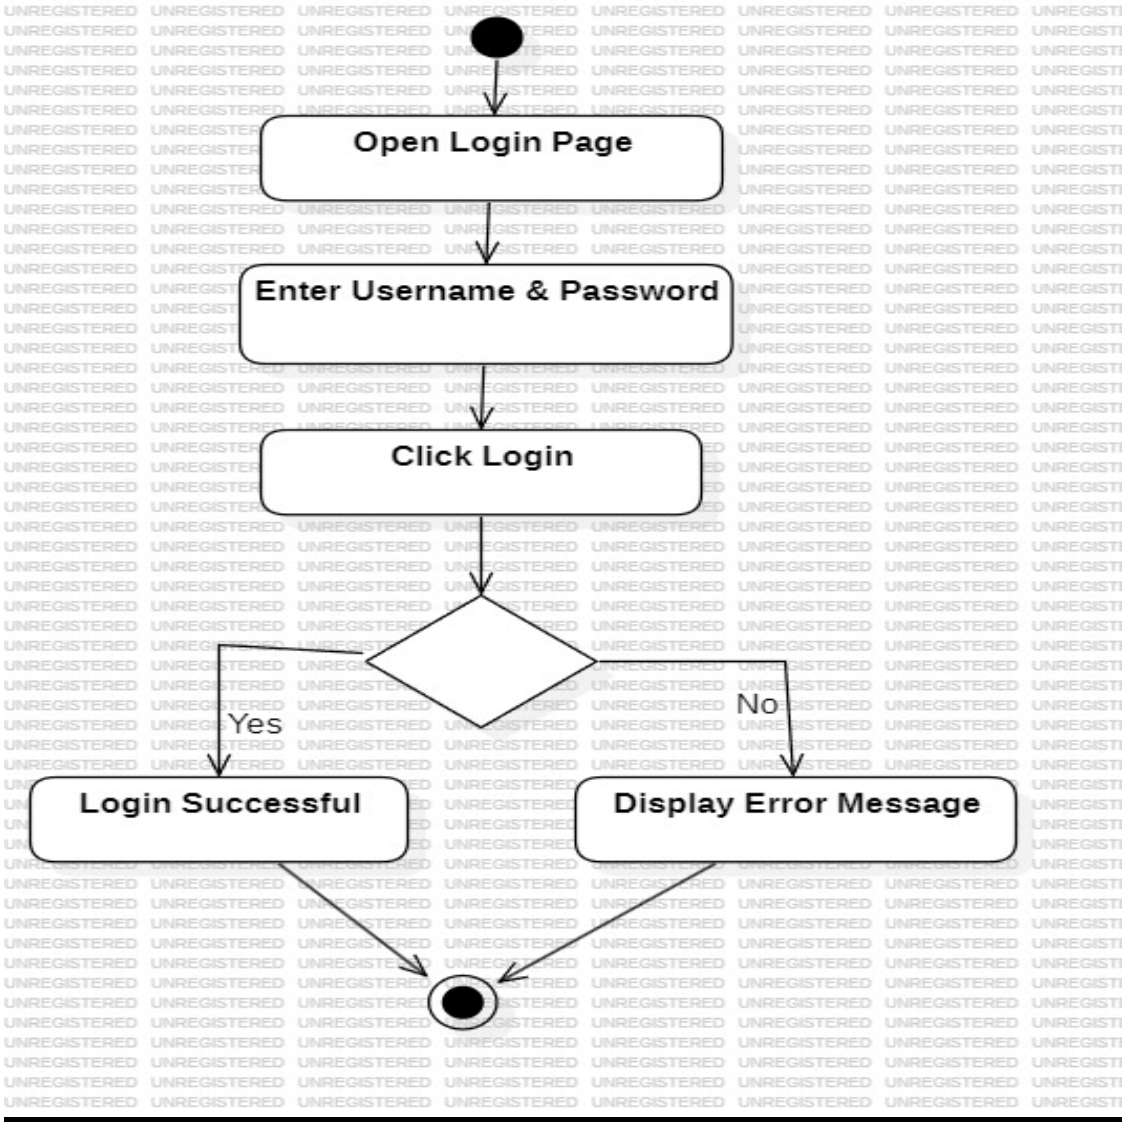

11. Privacy

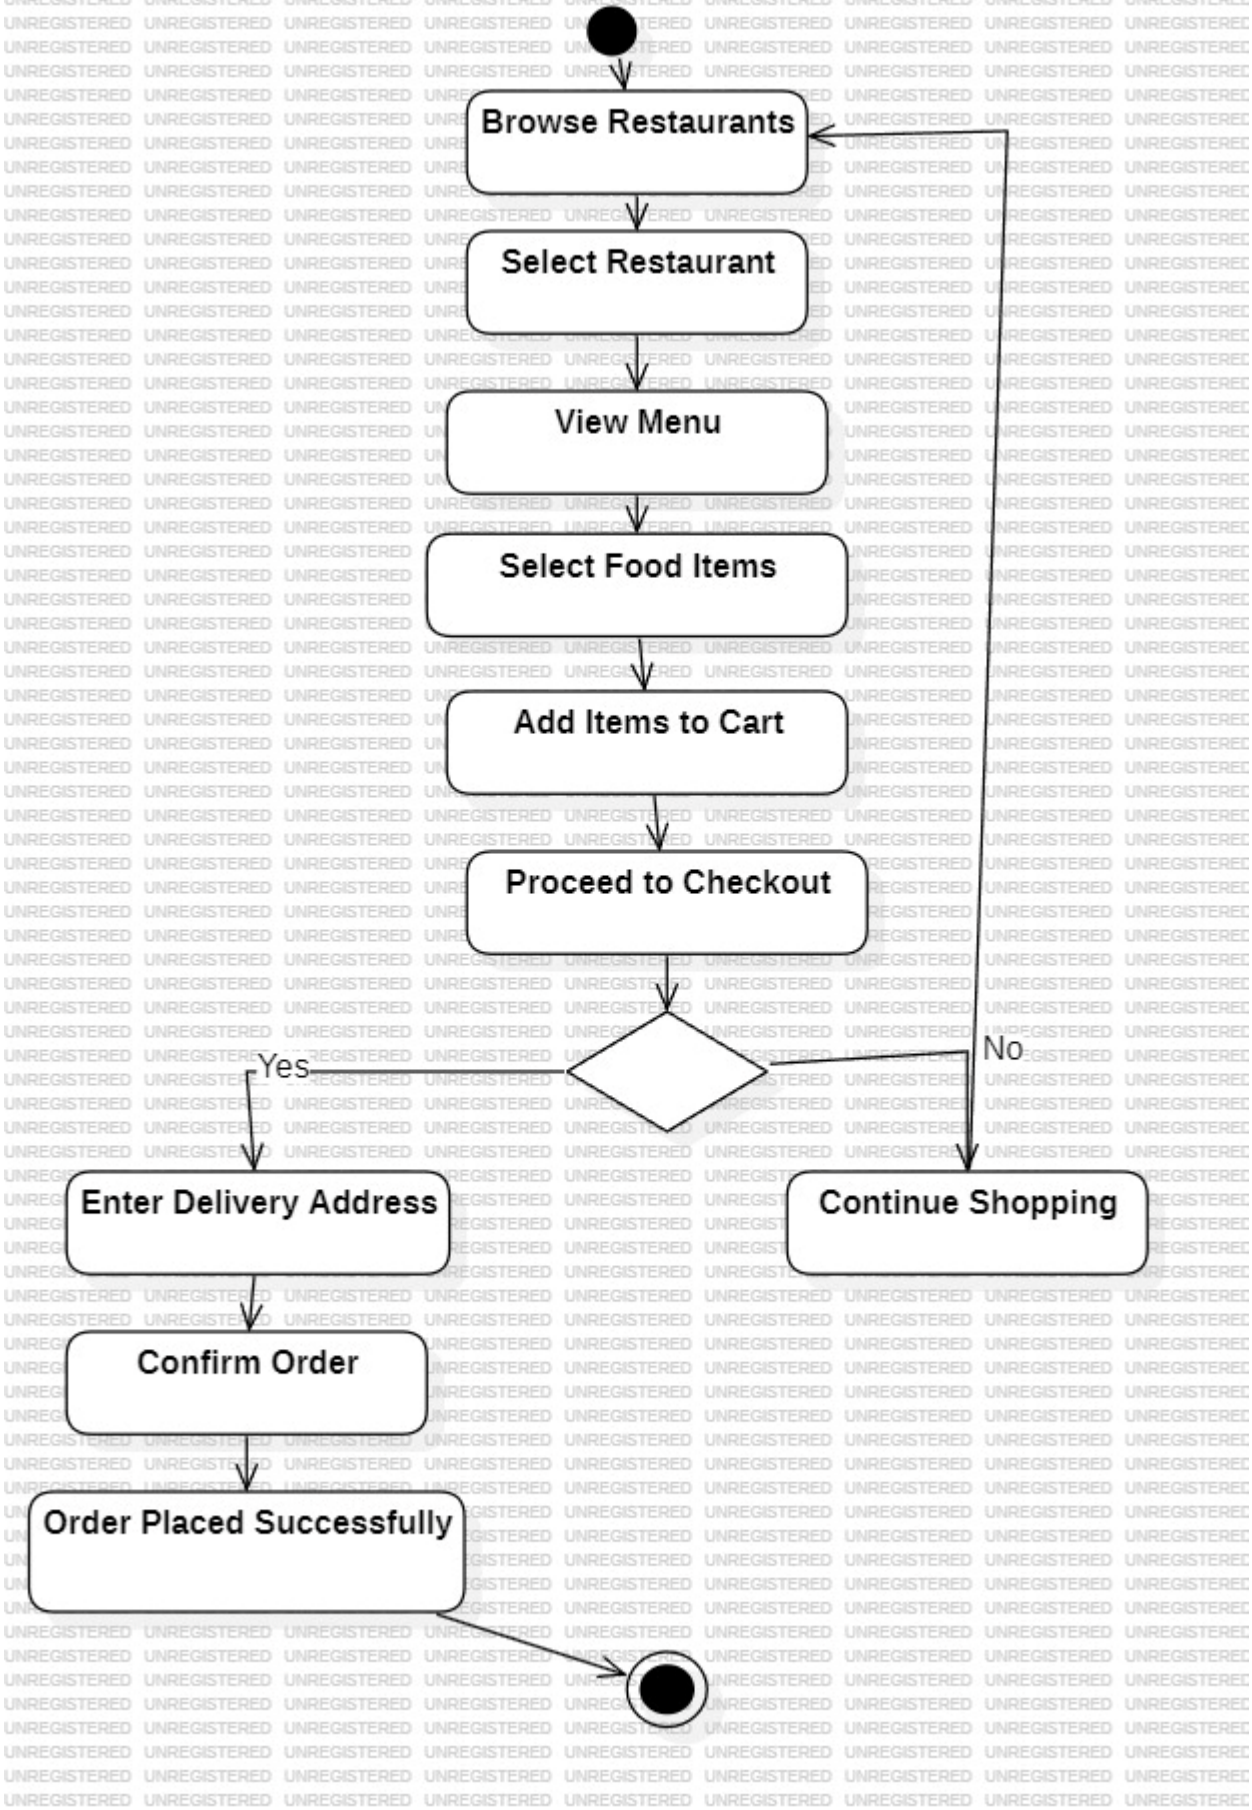

- Customer information should remain confidential.
- Personal details should not be shared without permission.
